

# EZ ICE™

THE 60 MINUTE BACKYARD RINK

**EZ ICE** is the proven leading rink system for parks and municipalities. Our proprietary bracket-and-strap system requires no stakes or tools. You can set the rink up on any surface and assembly in the fall and take-down in the spring takes less than 60 minutes. Plus, the new **EZ ICE PRO Home Arena System™** allows you to build an arena-style rink for full hockey games at a fraction of the cost of other large rink systems.

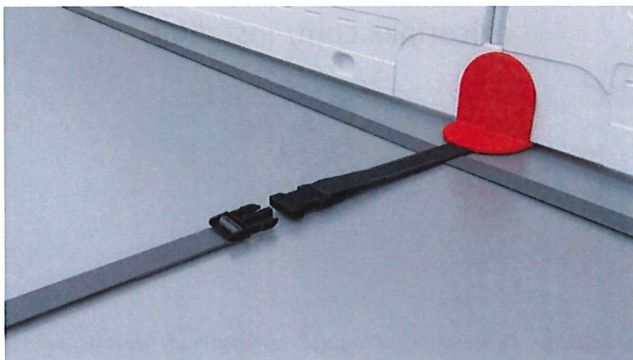

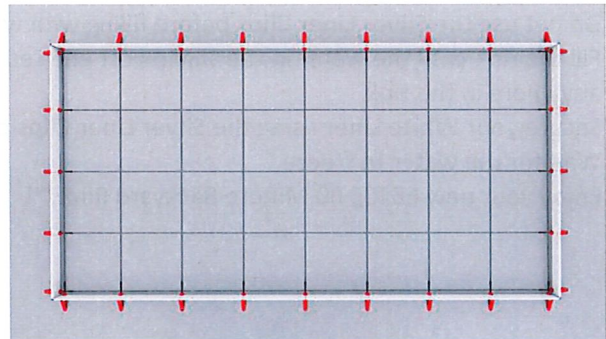

Congratulations on your new EZ ICE 60 Minute Backyard Rink™, and welcome to the EZ ICE family. We are excited for you to assemble your rink and start skating! The EZ ICE Rink is designed for assembly with no tools on any flat surface. Before you begin, it might help to watch some of our assembly videos, so you have a sense of how the pieces fit together and how the strap system works. Remember, your rink needs to be set up in a flat area with no more than 12" of slope. Too much slope across the rink and the water level could exceed the "max fill line." It is important to find the flattest area available, even if it is not in the direct center of your yard! As part of the EZ ICE family, we hope you will share your experiences with us, and don't forget to tag EZ ICE in all of your social media posts. **Let's get started!**

### WHAT IS INCLUDED

- **White Boards** (each straight board is 5' long x 16" high)
- (A) **Rounded Corner Boards**, or
- (B) **Blue Corner Connectors** (*not included if you have **Rounded Corner Boards***)
- **White Liner** (your liner should extend over the boards on all sides.)
- **Red Brackets** with pre-connected **Strap Loops**
- **Black Straps**
- **Silver Liner Clips**

### STEP 1: LAY OUT THE COMPONENTS

1. Lay the **White Boards** around the perimeter of your rink.
2. Place one **Red Bracket** at the intersection of each pair of **White Boards**, with two at each corner. (*see below for rounded rinks*)
3. Place (A) the **Rounded Corner Boards**, or (B) one **Blue Corner Connector** at each corner of the rink.
4. Leave the **White Liner**, **Silver Liner Clips**, and **Black Straps** for later.

### STEP 2: ASSEMBLE YOUR RINK

- Start at one corner of the rink and slide the **White Boards** together so they interlock around the entire perimeter.
- The **White Board** sits in the groove in the **Red Bracket** with the triangle side of the bracket on the outside of the rink. Make sure the bracket sits at the seam of the two boards.
- The **Strap Loops** extend under the **White Board** into the inside of the rink.
- Once all the **White Boards** are set up, clip the **Black Straps** to the **Strap Loops** both length and width wise. There should be one strap connecting each pair of opposing brackets. Remove the slack from the straps. Pull taut, but do not overtighten.
